GQB 型潜水贯流泵

GQB Tubular type submersible pump

概述 Outline

GQB 型潜水贯流泵是一种低扬程大流量卧式泵型，采用机泵同轴后灯泡式结构，与常规立式轴流泵和立式潜水轴流泵相比它具有一系列的优点：

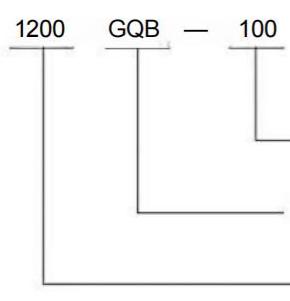

1. 吊起高度小，泵房高度低，基础开挖深度低，有效减少土工及建筑工程投资；
2. 进出水流道顺直，流道总水力损失小；
3. 由于泵潜入水中，运行时噪音低、无高温，改善了工作条件且气蚀性能好；
4. 其灯泡比远小于传统贯流泵，因此装置效率大为提高；
5. 采用对称式安装结构，可实现整体调头安装及双向抽水；
6. 安装方便快捷，具有良好的可维修性；
7. 操作方便，可实现遥控和自动控制；

8.GQB 型潜水泵可用于城市雨水泵站、水利防洪泵站、农业灌溉泵站和排涝泵站等。该型泵尤其适用于低扬程、大流量场合，在扬程和比转速相同的情况下，装置效率高于常规立式轴流泵和立式潜水轴流泵，扬程愈低，比转速愈高，提高的幅度愈大。输送介质为水或物理化学性质类似于水的其它液体，最高被输送液体温度为40℃。

GQB type submersible pump is a low-lifttubular large flow horizontal pump,with a post-bulb pump coaxial structure, and the conventional vertical axial and vertical submersible pump has a number of advantages compared to its:

- 1.Lifting height of a small pumping station height is low,foundation excavation depth is low,effectively reduce the geotechnical and construction investment;
- 2.Straight out of conduit,the total hydraulicflow losses small;
- 3.As the pumpinto the water,run-time,low noise,no heat,improved working conditions and good cavitation performance;
- 4.The light bulbis far less than the conventional pump,thus greatly improving plant efficiency;
- 5.Symmetrical mounting structure can be installed to achieve the overallU-turn and two-way pumping;
- 6.Easy installation and quick and has good maintainability;
- 7.Easy to operate and can realize remote control and automation;

电泵型号举例说明 Pump Model example

泵比转速的1/10取整数(即该泵的比转速为1000)

Pump specific speed of 1/10 is integer (i.e., the ratio of the pump speed is 1000)

潜水贯流泵

Diving Through Pump

出口名义直径

Export nominal diameter

结构及安装

Structure and installation

贯流泵(如图1)进口到出口呈筒状，泵与电机同轴连接，泵段部分为轴流泵的叶轮部件、叶轮外壳和导叶体组合。电机安装在导叶体后面的灯泡体内，导叶体出口法兰接导流筒，将电机四周出水汇集成管状流出。叶轮外壳前和导流管后分别接前锥管和后锥管，构成贯流泵壳体，两个锥管的法兰尺寸相同。其安装尺寸详见图2。

Tubular pump(Figure 1)was imported into the export barrel,pump and motor coaxial connection,part of the axialflow pump impeller section parts,impeller housing and the guide vane combination.The motor is installed in the bulb body behind the guide vane and guide vane exit flange connected draft tube,the water around the motor poolinto a tube flow.Impeller shell, respectively before and after the pick before the draft tube cone after cone tube and tube to form tubular pump housing,the two tapered pipes have the same flange size.The installation dimensions see Figure 2.

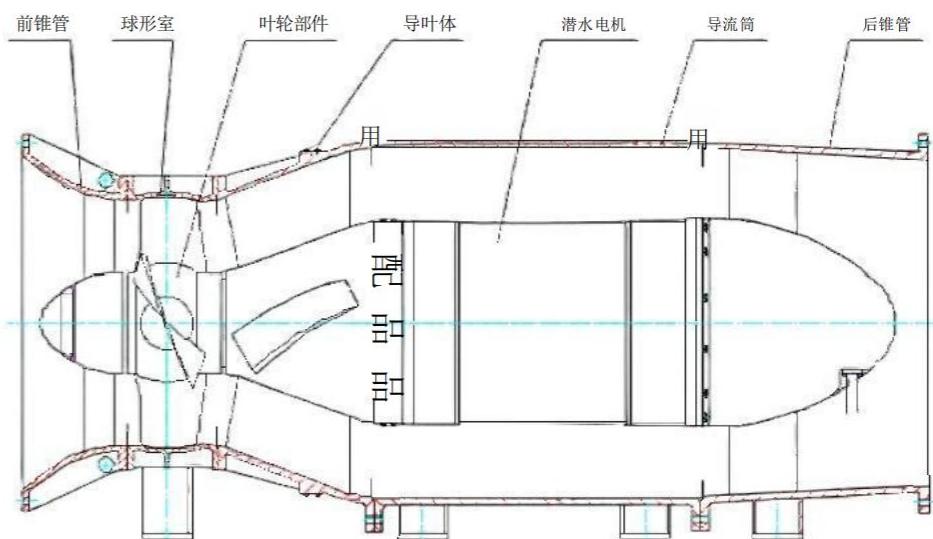

图1 GQB 型潜水贯流泵结构图

Figure 1 GQB tubular type submersible pump chart

泵站布置

Pump Station Layout

贯流泵站是按一个直的水平地道进行布置的。

以贯流泵安装外形尺寸作为基本尺寸，泵前后分别通过伸缩节与进水流道和出水流道连接，两个伸缩节固定部分被埋入地道。进水流道进口流速应小于1m/s，取用矩形断面；出水流道出口流速为1.52m/s，为方形断面，出口处设浮箱拍门断流。进水流道进口处设置工作闸门，非运行季节关闭闸门以防止泵内泥沙淤积。当需要检修贯流泵时，关闭闸门排水后即可拆泵检修。

厂房内机组之间不设隔墩，贯流泵安装在厂房底部平台上，平台四周设排水明沟通往集水井，井内设排水泵，将渗漏

水和检修污水排出厂房外；厂房内设一层或多层环形巡视走道，通过各层走道上下之间楼梯可以从地面到底部对贯流泵进行巡视。

厂房底部应有通风、排湿和散热等设施。

厂房内设有桥式起重机，用于起吊机组进行安装和检修(如附图1)。也可不设厂房，改用汽车起重机进行安装检修。

Tubular pump is based on a straight horizontal flow for layout.

To tubular pump installation dimensions as the basic size,before and after the pump through the expansion joints and inlet and outlet conduit connected to the fixed part of the two expansion joints buried inflow Road.Inlet of the flow rate should be less than 1m/s,access to rectangular;outlet conduit exit flow rate of 1.52m/s,the square cross section,the exit door,located pontoon stop.Office inlet of the work to set the gate to close the gates of non-operating season to prevent sediment deposition within the pump.When you need to repair tubular pump,close the gate can be removed after the drainage pump maintenance.

Between plants within the unit no pier,tubular pump installed in the factory at the bottom of the platform,the platform surrounded by water drainage leading to the set of well designed,well equipped with drainage pump,the leakage of water and maintenance of sewage discharges outside the plant;plant equipped with a layer of or multi-ring inspection aisle,between the stairs and down the aisles through the layers of the ground in the end from the Ministry of tubular pump inspections.

The bottom of the plant should have ventilation, dehumidification, heat dissipation and other facilities.

Plant is equipped with overhead cranes for lifting unit for installation and maintenance(such as Figure 1).Alternatively, mobile cranes can be used for installation and maintenance instead of setting up a plant.

注：泵站有关尺寸和设备可根据贯流泵站横剖面的相对尺寸和提示确定。

Note:The pump station and equipment,the size of tubular pump according to the relative cross section to determine the size and tips.

双向抽水结构和操作管理

Two-way pumping structure and operations management

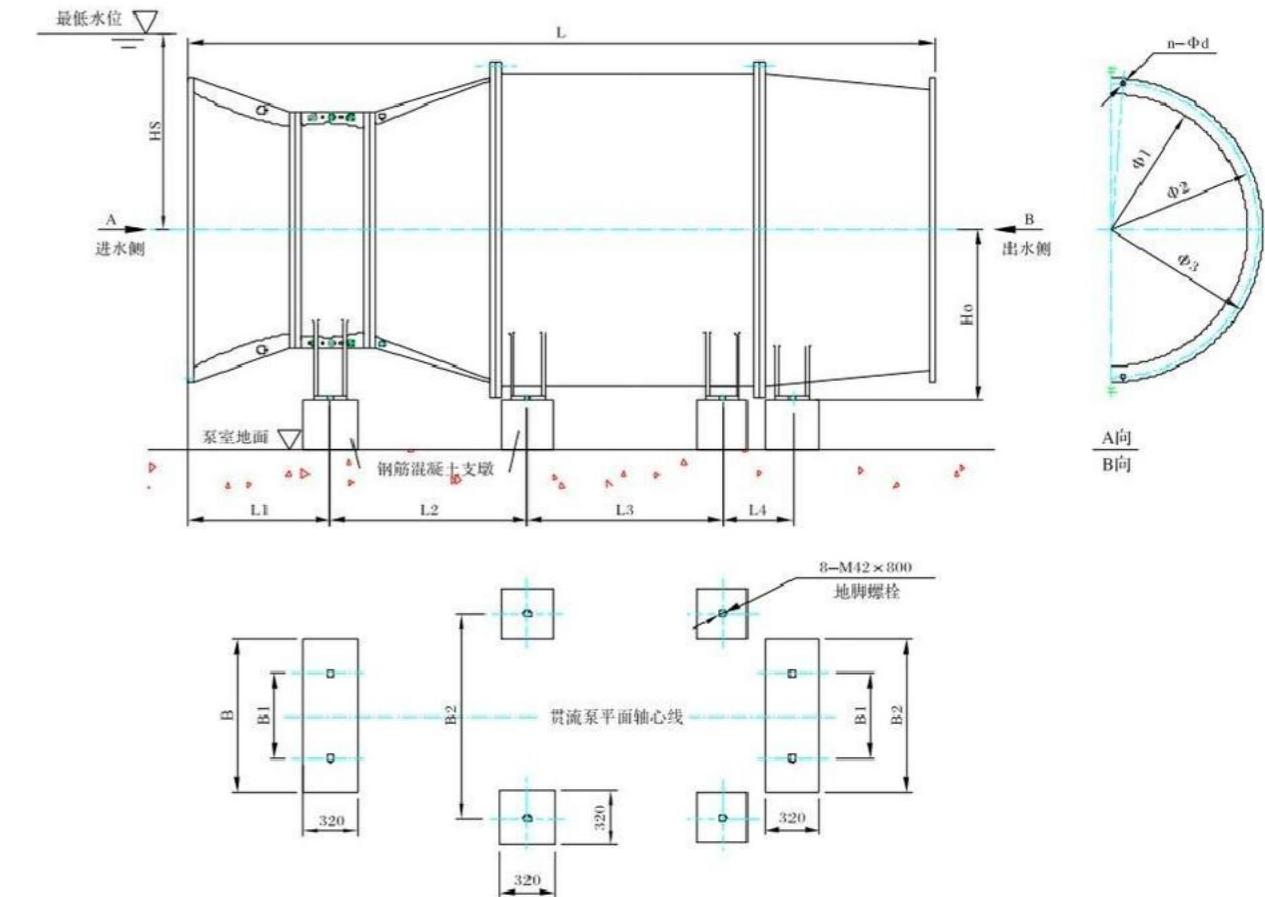

贯流泵可实现双向抽水。

用单向叶轮(常规叶片)配贯流装置型式，通过泵体整体调头来实现双向排水。整体调头的贯流泵进出口尺寸相同。

贯流泵出水方向应对着排涝方向，在需要灌溉时，泵体整体调头，灌溉结束后恢复排涝方向。

Tubular pump for two-way pumping.

Impeller with a one-way (regular blades)with tubular device type,the overall U-turn through the pump to achieve two -way drainage.Overall U-turn in the import and export of the same size tubular pump.Respond to the direction of tubular pump water drainage direction in the need for irrigation,pump the whole U-turn,after the resumption of irrigation,drainage direction.

根据合同要求机组成套供应范围包括贯流泵、浮箱拍门、伸缩节、电动闸门、清污机、控制柜、就地接线箱(端子箱)等主要部件和橡胶密封件、机械密封、轴承、叶片等常用备品备件，待合同生效后，提供所需资料，供设计院作泵站技术设计之用。

Under the contract unit complete scope of supply includes pump, pontoon-to-door, expansion joints, electric gate, cleaning machine, control box, junction box locally (terminal box) and other major components and rubber seals, mechanical seals, bearings, leaves and other commonly used spare parts, when the contract comes into effect, provide the information required for the design institute for pumping technology for design purpose.

GSB 型双向贯流泵 GSB-Type tubular pumping

概述 Outline

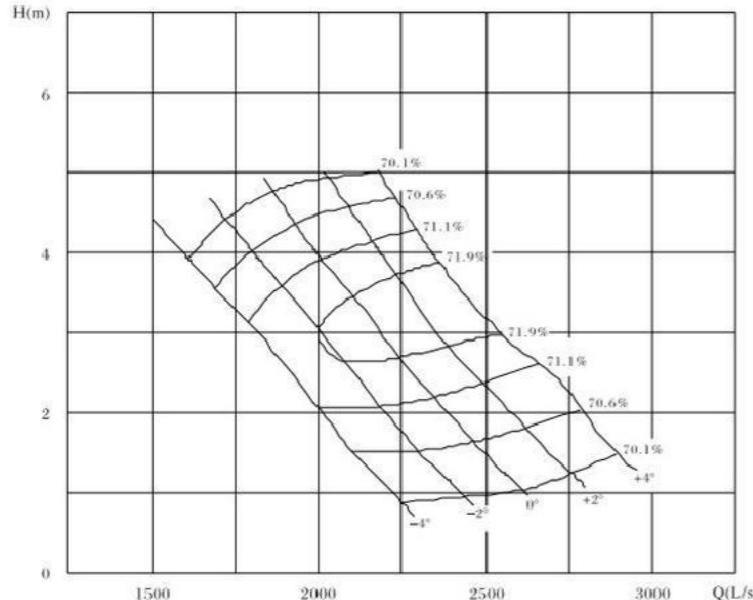

GSB型双向贯流泵是我公司研制的新型产品，其优点是，使用时只要改变电机的旋转方向，就可以实现正反向抽水，而不需要将电泵拆卸、调头；具有可向两个方向输送介质的特性。适用于水资源丰富、需要向不同方向引、排水的用户。该泵双向输送介质的特点，使设备结构紧凑，占地面积小，不但为用户节省了购置设备的资金，同时，减少了一套供水管线的铺设，便于用户对设备的安装、控制和维护。

GSB-Type tubular pumping is our development of new products, the advantage is only used to change the motor rotation direction, forward and reverse pumping can be achieved without the need to pump the demolition, a U-turn; have available to 2 the direction of medium characteristics. Applicable to abundant water resources, the need to lead in different directions, drain the user. The pump features atwo-way transmission medium, so that structure is compact, small footprint, not only for the user to save the money for equipment, while reducing the laying of a water supply pipeline, user-friendly installation of the equipment, control and maintenance.
